Recombinant homocysteine methyltransferase is a key metabolic enzyme expressed through genetic engineering technology. It catalyzes the methylation of homocysteine to produce methionine and participates in the folate cycle and methylation reaction. This enzyme plays an important role in the pathological mechanism of cardiovascular disease, neurodegenerative diseases and birth defects, and is widely used in in vitro diagnostic reagents, drug development and scientific research. Recombinant RHMT has high purity, high activity and stability, and is usually stored in lyophilized powder or liquid form. It must meet GMP standards to meet clinical and industrial needs.

United States market for Recombinant Homocysteine Methyltransferase is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
