## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Recombinant hormones are hormones that are manufactured in a laboratory using recombinant technology for therapeutic purposes. The endocrine system in the human body consists of glands (pituitary, thyroid, parathyroid, adrenal, pancreas, etc.) that produce hormones that regulate metabolism, growth and development, reproduction, sexual function, tissue function and other functions. If hormone levels are too high or too low, there is a problem with the endocrine system.

The global market for Recombinant Hormone is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Recombinant Hormone market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Recombinant Hormone market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Recombinant Hormone market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Recombinant Hormone market is expected at value of US\$ million in 2022
