Recombinant human coagulation factor IX is a drug produced by genetic recombination technology, mainly used to treat hemophilia B (i.e. congenital coagulation factor IX deficiency). Its function is to supplement the coagulation factor IX that is lacking in the patient's body to help control and prevent bleeding. The drug is a colorless and clear solution after reconstitution. It is suitable for daily bleeding management and perioperative management of hemophilia B patients, but is not suitable for the treatment of other types of coagulation factor deficiency or conditions related to the anticoagulant effect of coumarin.
