Abstracts

The global Recombinant Mouse Oncostatin M (OSM) market size is predicted to grow from US$ 117 million in 2025 to US$ 196 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Recombinant mouse oncostatin M (OSM) is a cytokine belonging to the interleukin-6 (IL-6) family, expressed by mouse T cells or monocytes, and has multiple biological functions. It plays a key role in cell proliferation, differentiation, inflammatory response, immune regulation and tumor suppression. Recombinant mouse OSM is often used in cell signaling pathway research, inflammatory model establishment, tumor microenvironment research and drug target verification, especially in the analysis of STAT3 pathway activation and acute inflammatory response mechanism. The protein is usually provided in a high-purity recombinant form and is suitable for mouse cell line or animal experiments.

With the deepening of research on inflammatory diseases, tumor immunity, regenerative medicine, etc., the market demand for recombinant OSM has gradually increased. At present, the price of scientific research-grade recombinant mouse OSM varies depending on purity and labeling. Common specifications such as 10?g or 100?g of freeze-dried protein cost between US$200 and US$800 (depending on the supplier). Judging from market trends, the potential of IL-6 family factors (such as OSM) in cytokine network regulation and immunotherapy has received increasing attention. It is expected that the market for this type of cytokines will grow steadily in the next few years, especially in the fields of biopharmaceuticals and immunology research in Europe, the United States and Asia.
