Recombinant PKB/Akt protein is a PKB/Akt protein synthesized from non-natural sources through genetic engineering technology. PKB/Akt protein is an important signal transduction protein that plays a key role in biological processes such as cell proliferation, survival, metabolism, and apoptosis. Through gene cloning and expression technology, the PKB/Akt gene can be introduced into eukaryotic or prokaryotic cells, and then high-purity PKB/Akt protein can be obtained through protein expression and purification technology. Recombinant PKB/Akt proteins usually have the same amino acid sequence and structure as natural PKB/Akt proteins, and therefore have similar biological functions and activities. They are usually used in in vitro experiments, such as enzyme activity determination, protein-protein interaction research, drug screening and structural biology research, etc., to explore the regulatory mechanism and biological function of the PKB/Akt signaling pathway, or as drugs for biomedical research target.

The global Recombinant PKB/Akt Protein market size is projected to grow from US\$ 6.2 million in 2024 to US\$ 9.9 million in 2030; it is expected to grow at a CAGR of 8.3% from 2024 to 2030.
