According to this study, the global Recombinant Plasma Proteins market size will reach US\$ 109 million by 2031.

For almost 50 years, the fractionation of human plasma has been the sole possible source of a wide range of therapeutic proteins--such as coagulation factors, anticoagulants, immunoglobulins, and albumin--essential to the treatment of serious congenital or acquired bleeding or immunological diseases. In the last 20 years, the application of recombinant technologies to mammalian cell cultures has made possible--although with some limitations in productivity, costs, and immunogenic risks--

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
