The global Reconfigurable Intelligent Surfaces (RIS) market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Reconfigurable Intelligent Surfaces (RIS) are advanced electromagnetic surfaces designed to dynamically control and manipulate wireless signals in a highly efficient and programmable manner. RIS consists of an array of passive or active elements, such as meta-materials or phase-shifting units, that can adjust the phase, amplitude, and polarization of incident electromagnetic waves in real-time. This technology enhances the performance of wireless communication systems by intelligently redirecting signals, improving coverage, reducing interference, and enhancing data rates without the need for additional power-hungry infrastructure. RIS can be controlled via software, allowing it to adapt to changing environments and optimize wireless signal propagation, making it a promising solution for next-generation wireless networks, such as 5G and beyond, smart environments, and the Internet of Things (IoT).

United States market for Reconfigurable Intelligent Surfaces (RIS) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Reconfigurable Intelligent Surfaces (RIS) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
