The global Recovered Titanium Products market size is predicted to grow from US\$ 1092 million in 2025 to US\$ 1967 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

There are many sources of titanium scrap. For example, the titanium scrap produced during the production of sponge titanium, whose upper skin, bottom and sides are contaminated by iron, chlorine, oxygen, nitrogen, and other impurities that do not meet product quality standards, must be disposed of and recycled. In addition, there are also titanium scrap produced during the process of titanium ingot casting, and titanium scrap produced by processing titanium material into titanium products, which are all important sources. Due to a large amount of titanium scrap, comprehensive utilization is promising.
