Rectangular silicon wafers, as the name suggests, refer to photovoltaic silicon wafers with a rectangular shape. In recent years, with the continuous upgrading of photovoltaic technology, the size of photovoltaic silicon wafers has continued to iterate, and the power of photovoltaic modules has continued to increase, but the shape has always been square. However, there is a lot of waste in the production process of square

silicon wafers, which limits the optimal cost and efficiency of photovoltaic cells. Thus, the rectangular silicon wafer came into being. Compared with square silicon wafers, rectangular silicon wafers get rid of the relationship between silicon wafer area and silicon wafer thickness, and can realize super large, ultra-thin and optimized design of silicon wafers, thereby achieving the purpose of reducing production costs and increasing customer value.
