The report requires updating with new data and is sent in 48 hours after order is placed.

Aluminium recycling is the process by which scrap aluminium can be reused in products after its initial production. The process involves simply re-melting the metal, which is far less expensive and energy-intensive than creating new aluminium through the electrolysis of aluminium oxide (Al<sub>2</sub>O<sub>3</sub>), which must first be mined from bauxite ore and then refined using the Bayer process.
