The global Recycled Cardboard market size is predicted to grow from US\$ 46330 million in 2025 to US\$ 62020 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

Recycled cardboard is a kind of paper produced from waste paper through more than a dozen processes such as sorting, purification, beating, and papermaking. 80% of its raw materials come from recycled waste paper, so it is known as an environmentally friendly paper with low energy consumption and light pollution.

As consumer tastes shift toward practical packaging options and sustainability, the demand for plastic packaging will decline, which will drive the paper and paperboard industry. Growing demand for paper-based packaging items in the food and industrial sectors will further improve the outlook for the paper recycling industry in the coming years. If packaging waste is not recycled, it may seriously endanger the environment and human health.
