The global Recycled Polyester Plastic Film market size is predicted to grow from US\$ 596 million in 2025 to US\$ 1171 million in 2031; it is expected to grow at a CAGR of 11.9% from 2025 to 2031.

Recycled polyester plastic film refers to a type of plastic film made from recycled polyester material. Polyester is a synthetic polymer that is commonly used in the production of various products, including textiles, packaging materials, and plastic films. The process of creating recycled polyester plastic film involves collecting post-consumer or post-industrial polyester waste, such as used polyester clothing or manufacturing scrap. This waste material is then cleaned, sorted, and processed to remove any contaminants. Next, the polyester waste is melted and extruded into thin film sheets, which can be used for various applications.

With increasing concerns about environmental sustainability, there is a growing demand for eco-friendly and recycled products. Recycled polyester plastic film offers a more sustainable alternative to virgin polyester film, as it reduces the consumption of new resources and minimizes waste sent to landfills. Many companies are adopting sustainability goals as part of their corporate social responsibility efforts. They aim to reduce their environmental impact and incorporate recycled materials into their products and packaging. Recycled polyester plastic film aligns with these sustainability objectives and is increasingly sought after by businesses. Consumer awareness and demand for sustainable products have been growing steadily. People are increasingly seeking environmentally friendly alternatives and are willing to choose products made from recycled materials. As a result, there is an increasing market demand for recycled polyester plastic film.
