The polystyrene (PS) resin recycling industry is an important part of the circular economy, helping to reduce waste and conserve resources. PS is a type of plastic that is commonly used in a range of products, including food packaging, toys, and insulation. However, PS is not biodegradable and can persist in the environment for hundreds of years, posing risks to wildlife and ecosystems. The recycling of PS resin involves collecting and processing waste PS products into new materials, reducing the need for

virgin PS resin production. There are several methods of PS resin recycling, including mechanical recycling, chemical recycling, and pyrolysis.
