## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Recycled resin, also known as recycled plastic resin, refers to a type of plastic material that is produced by recycling and reprocessing used or discarded plastic products. It involves collecting plastic waste, sorting and cleaning it, and then melting and reforming it into new resin pellets or granules. The recycled resin can then be used as a raw material in various industries to manufacture new plastic products. The process of recycling plastic waste into recycled resin helps reduce the reliance on virgin plastic production, minimize plastic waste in landfills, and contribute to a more sustainable and circular economy.

The global Recycled Resin market size is projected to grow from US\$ 73850 million in 2024 to US\$ 102420 million in 2030; it is expected to grow at a CAGR of 5.6% from 2024 to 2030.
