As the heavy metal, tin is scarce and expensive, with the continuous development of economy and the construction industry, its consumption also increased year by year, tin waste is also increasing in the process of industrial production or life, and the reserves is decreasing, so in order to meet the rapid development of tin industry, recycling tin industry has become an important direction of the development of tin industry.

The development of the recycled tin industry not only uses the two resources of tin to supplement the deficiency of the world's original tin mineral resources, but also can save energy and protect the environment from pollution, reduce the industrial production costs at the same time. With the development of economy, the development of recycled tin has attracted worldwide attention. The amount of recycled tin is more than 60% of

the original tin output in developed countries. The world's higher level production of recycling tin is mainly in industrial developed countries, such as the United States, Britain, Germany, Japan and so on.
