The global Recycled Unbleached Pape market size is predicted to grow from US\$ 443147 million in 2025 to US\$ 747249 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Recycled unbleached paper refers to a type of environmentally friendly paper made from recycled paper fibers, produced without any bleaching or brightening agents. It retains the natural color of recycled pulp, features lower carbon emissions and less environmental pollution, and is widely used in packaging, printing, household and food-contact applications. Recycled unbleached paper is an eco-friendly paper made from recycled waste paper, with minimal bleaching and chemical treatment during production, offering the advantages of energy conservation, emission reduction, and low-carbon environmental protection. It can be categorized by application and production method into recycled unbleached paper for packaging (such as corrugated cardboard and kraft paper), recycled unbleached paper for printing and writing (such as eco-friendly office paper and notebook paper), and special recycled unbleached paper for industrial use (such as paper bags and filter paper).

In 2023, China's total output of paper and paperboard reached 129.65 million tons, with a consumption volume of 131.65 million tons, and industry concentration continued to rise as the top 30 major paper enterprises produced a total output of 92.1903 million tons, accounting for 71.1% of the national total, indicating the dominant position of large enterprises in the packaging paper and paperboard sector. Recycled unbleached paper is widely used in eco-friendly packaging, logistics and express delivery, daily office work and special industrial fields, and demand for eco-friendly packaging paper keeps rising especially amid the rapid development of e-commerce and express delivery industry; the global market size of corrugated recycled paper is expected to exceed 180 billion

US dollars, with China, the world's largest producer and consumer, contributing more than 35%, and China's carbon peaking and carbon neutrality goals are forcing the industrial chain to upgrade. Domestically, China's express delivery volume hit 132.1 billion pieces in 2023, a year-on-year increase of 19.4%, which directly boosted the demand for packaging paper products, and leading enterprises like Nine Dragons Paper generated about 91.9% of their revenue from packaging paper products. The recycled unbleached paper market features high concentration and low technical barriers but relies heavily on recycled waste paper as raw material; major domestic paper producers including Nine Dragons Paper, Lee & Man Paper and Sun Paper hold the majority of production capacity, while some small and medium-sized enterprises gain raw material advantages through local waste paper collection and recycling systems, forming a regional competitive landscape. Driven by the carbon peaking and carbon neutrality goals and green packaging policies, the recycled unbleached paper market is expected to maintain steady growth in the future. Overall, recycled unbleached paper is dominated by packaging-grade products, its demand is pulled by e-commerce and express logistics, the industry competition presents a pattern of leading by large enterprises and supplemented by regional small and medium-sized enterprises, and environmental protection policies and raw material recycling systems will become the key factors for the future development of the market.
