Waste compaction is the process of compacting waste, reducing it in size. Garbage compactors compress waste so that more of it can be stored in the same space. Waste is compacted again, more thoroughly, at the landfill to conserve valuable airspace and to extend the landfill's life span.

Increasing awareness of environmental issues and the need for sustainable waste management solutions drive the demand for waste balers. Governments, municipalities, and industries worldwide are focusing on recycling and waste reduction, leading to a growing market for equipment like recycling compactors.
