The red, blue and yellow light therapy device is a therapeutic device that uses high-purity, high-power density red light, blue light and yellow light to irradiate the skin. The red, blue and yellow light therapy device uses a narrow-spectrum light source to emit cold light, which does not generate high heat and will not burn the skin. It converts light energy into intracellular energy, and through light signal transmission technology rather than thermal effects, it is quickly and effectively introduced into the subcutaneous tissue, absorbed by the erythrocytes of the cells, and produces the most efficient photochemical reaction - enzymatic reaction, which increases the activity of cells, promotes cell metabolism, and achieves the purpose of treatment.
