They typically utilize LEDs in the 630–850nm wavelength range. Through a wearable, flexible pad that adheres directly to the skin, they deliver red or near-infrared light to tissues, promoting mitochondrial activity, accelerating blood circulation, relieving muscle soreness, reducing inflammation, and enhancing skin repair. They are widely used in sports rehabilitation, skin care, postoperative recovery, and chronic pain management. Their design emphasizes flexible materials, adjustable temperature control, and multi-modal light therapy programs to enhance user experience and clinical applicability. Their upstream applications primarily rely on high-performance LED chips, flexible circuit boards, thermally conductive silicone, and medical-grade fabrics. Their downstream customers include consumer health brands such as CurrentBody and Beurer, sports rehabilitation centers such as Athletico and Select Physical Therapy, and e-commerce and retail platforms such as Amazon and Walgreens.
