Reduced-Risk Products (RRPs) is a term used in the context of tobacco and nicotine products to describe products that are believed to carry a lower risk of harm compared to traditional cigarettes. RRP are designed to provide users with nicotine, the addictive substance in tobacco, without the harmful effects associated with burning tobacco and inhaling the resulting smoke. The primary goal of RRP is harm reduction, aiming to provide an alternative to smoking for those who are unable or unwilling to quit nicotine use entirely.

Growing Consumer Interest: There is a growing awareness among consumers about

the harmful effects of traditional smoking. Many smokers are actively seeking alternatives that are perceived as less harmful, such as e-cigarettes, heated tobacco products, and nicotine pouches.

E-Cigarettes: E-cigarettes, also known as electronic nicotine delivery systems (ENDS), have gained significant popularity as RRPs. They work by heating a liquid containing nicotine and producing an aerosol that users inhale. These products come in various flavors and have been promoted as a less harmful alternative to smoking. The market for e-cigarettes has been expanding rapidly.

Heated Tobacco Products (HTPs): HTPs, like Philip Morris International's IQOS and British American Tobacco's glo, heat tobacco rather than burning it. They have gained traction in several markets as they produce fewer harmful chemicals compared to traditional cigarettes.

Nicotine Pouches: Nicotine pouches, which are smokeless and tobacco-free, have seen a surge in popularity. They are discreet and provide nicotine satisfaction without the need to inhale smoke or vapor. Brands like Zyn and Nicorette have introduced nicotine pouch products.
