The global Reducer for Humanoid Robots market size is predicted to grow from US$ 10.3 million in 2025 to US$ 6552 million in 2031; it is expected to grow at a CAGR of 193.4% from 2025 to 2031.

Reducers in humanoid robots are essential components for precise motion control, with common types being planetary reducers and harmonic reducers. Planetary reducers are suitable for most joints, offering high rigidity, high precision, and strong wear resistance, ensuring stable performance even under heavy loads. However, due to their relatively low reduction ratio, the precision of planetary reducers is somewhat limited. On the other hand, harmonic reducers are primarily used in areas like the shoulder, waist, and dexterous hands, where higher flexibility is required. Their advantages include a compact structure, low weight, and simplicity, but the materials used are prone to fatigue damage, requiring careful maintenance, especially under frequent use.
