The global Redundant Intelligent Braking Systems market size is predicted to grow from US$ 564 million in 2025 to US$ 1658 million in 2032; it is expected to grow at a CAGR of 17.0% from 2026 to 2032.

As the level of assisted driving increases, the driving subject gradually changes from the driver to the vehicle system. To ensure that it is always in operation, a redundant system is essential. In the future, when L3 and above assisted driving is achieved, redundant systems will become standard.

The redundant intelligent braking system is a backup braking system that can take over the braking operation when the main braking system fails or fails, ensuring that the vehicle can safely decelerate and stop. The system achieves redundancy of the braking function by equipping two or more independent electronic brake control units (such as ESP and iBOOSTER, etc.)

United States market for Redundant Intelligent Braking Systems is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
