Refined Batana Oil is a golden-brown vegetable oil extracted from the nut of the American oil palm (Elaeis oleifera), primarily cultivated in Central and South America, especially in Honduras. After mechanical pressing and solvent extraction, the crude oil undergoes refining steps such as degumming, neutralization, bleaching, and deodorization to remove impurities, free fatty acids, and odor, resulting in a stable, cosmetically suitable product. The supply chain begins with smallholder harvesting of palm nuts, followed by local processing cooperatives or refineries that handle oil extraction and purification. Refined Batana Oil is then distributed through cosmetic ingredient suppliers and exported to manufacturers of hair care, skincare, and anti-aging products, where it is valued for its rich oleic and linoleic acid content, natural emollient properties, and ability to restore hair and skin health. In 2024, global Refined Batana Oil output was about 4,400 tons with a capacity near 5,500 tons, priced at USD 10,500–18,000 per ton by grade and purity, achieving an average gross margin of 39%.
