Bismuth is generally found in metal deposits such as copper, lead, and tungsten. In terms of the industrial chain, the upstream of the bismuth industry is the bismuth smelting industry, and the midstream is the purification of elemental bismuth and the deep processing of bismuth products. Bismuth is mainly processed into bismuth alloys, bismuth oxide, and bismuth salts and further used in the downstream metallurgical industry, pharmaceutical and chemical industry, glass industry, electronics industry, and other industries. High-purity bismuth refers to bismuth products with a purity of more than 99.99%, usually requiring more than 99.999% (i.e. 5N grade or even higher). Its production process is strict and technically demanding, requiring the use of fine purification technologies such as regional smelting, electrolytic refining, and vacuum distillation.
