A reflected radiation meter is an instrument used to measure the intensity of reflected radiation from an object's surface. It is usually used to evaluate the material's reflective performance to solar radiation or other light sources. It receives electromagnetic waves (such as visible light, infrared rays, etc.) reflected from the measured surface through a sensor and converts them into electrical signals to quantify the intensity of reflected radiation. It is widely used in meteorology, environmental monitoring, building energy conservation, material research and other fields.

United States market for Reflected Radiation Meter is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
