Reflective busbars have excellent reflective properties, which can reflect incident light back to the surface of solar cells and improve photoelectric conversion efficiency. Its special surface design and material selection can minimize the loss of light and increase the power generation efficiency of solar panels. Reflective busbars have low resistance and high conductivity, ensuring stable current transmission and improving the efficiency of photovoltaic modules. It can effectively conduct current, reduce energy loss, and ensure the smooth transmission of electrical energy. The reflective busbar has undergone special treatment and has good corrosion resistance, which can maintain stable performance in harsh environments. It is not affected by factors such as oxidation and corrosion, and can work stably for a long time.In 2024, global Reflective Busbar production reached approximately 23.78 K MT, with an average global market price of around US$ 16360 per MT.
