The global Reflective Mulch Film market size is predicted to grow from US\$ 299 million in 2025 to US\$ 528 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

In 2025, global sales of reflective mulch film reached 142 million square meters, with an average selling price of US\$2.15 per square meter and a total production capacity of approximately 160 million square meters. This product is a high-reflectivity, multi-layered composite polyethylene film with a silver-plated or white reflective layer. It is used to cover agricultural planting areas, improving crop light uniformity, promoting photosynthesis, suppressing weed growth, and improving fruit quality by reflecting sunlight. It is mainly used in the cultivation of high-value-added crops such as tomatoes, peppers, strawberries, and melons. Upstream raw materials include polyethylene resin, reflective coating materials, toughening agents, and stabilizers; downstream suppliers are mainly large-scale greenhouse planting enterprises, small and medium-sized farms, and scientific research demonstration bases. The gross profit margin is approximately 26%, higher than that of ordinary polyethylene greenhouse film, reflecting its functional added value. In the future, with the development of high-value-added crop cultivation and precision agriculture, the demand for reflective mulch film will continue to grow. Business opportunities mainly lie in the research and development and promotion of high-reflectivity, weather-resistant, reusable, and environmentally friendly materials. It can also be used in combination with intelligent greenhouse light control systems and covering films, providing enterprises with technological upgrades and high-value-added application opportunities.
