Reflective Polarizing Films recycle light from the backlight system that would be absorbed by the LCD and can increase brightness by 50–60%. These films select incident light with a specific polarization state to pass through and reflect the other polarization state back into the backlight where it can be recycled; they are used in TFT-LCD products requiring high brightness, such as TVs, highend notebook PCs, and high-end monitors.

Global Reflective Polarizing Films key players include 3M, Shinwha, Zeon Chemicals, etc. Global top three manufacturers hold a share over 80%.

North America is the largest market, with a share about 55%, followed by South Korea, and Japan, both have a share about 45 percent.

In terms of product, Multi Layer is the largest segment, with a share nearly 90%. And in terms of application, the largest application is LCDs, followed by Cameras, etc.
