Reflective Solar Window Films are thin, multi-layered coatings applied to glass surfaces that use metallic or ceramic compounds to reflect a portion of incoming solar radiation, thereby reducing heat gain, glare, and ultraviolet (UV) exposure inside buildings or vehicles. Designed to enhance energy efficiency, these films help lower cooling costs by rejecting infrared rays while still allowing visible light transmission for natural brightness. In addition to thermal control, they protect interior furnishings from fading, improve occupant comfort, and often add a degree of privacy and aesthetic appeal by giving windows a mirrored or tinted appearance.
