Refractories for AOD (Argon Oxygen Decarburization) vessels are specialized materials designed to withstand the harsh conditions encountered during the stainless steel production process. AOD vessels are used for refining stainless steel, particularly to reduce the carbon content and adjust the alloy composition. Refractories used in AOD vessels must be able to withstand high temperatures, chemical corrosion from molten metal and slag, and mechanical stress. These refractories are strategically chosen and placed within the AOD vessel to provide optimal protection against the extreme conditions encountered during stainless steel refining. The selection of refractories depends on factors such as operating temperatures, slag chemistry, mechanical stress, and the specific requirements of the AOD vessel design.

The global Refractories for AOD Vessels market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
