Refractories for industrial furnaces are inorganic nonmetallic materials that can operate at high temperatures, and such materials are usually required to withstand physical and chemical effects at high temperatures without losing their structural integrity.

Refractories are generally required to be no less than 1580 ° C, and can maintain good mechanical properties at high temperatures, such as compressive strength, thermal shock resistance, wear resistance, etc. Refractories for industrial furnaces are mainly used for masonry of industrial furnaces, including but not limited to various heating furnaces, smelting furnaces, cracking furnaces, calcinations, heat treatment furnaces, etc. in steel, non-ferrous metals, chemicals, building materials, ceramics, glass, petroleum, electric power and other industries. These materials can not only withstand high temperatures, but also resist corrosion by slag, gas and molten metal, while providing good thermal insulation, reducing heat loss and improving energy efficiency.
