The global Refractories Materials market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Cement and glass are the fastest-growing end-use industries of refractories. Planned infrastructure projects in India and Indonesia indicate a positive development regarding the demand for cement. Furthermore, in the North American region, the U.S. is expected to witness economic upturn, encouraging major cement producers to utilize their production capacities. The growth in the cement industry is expected to boost the demand for refractories during the forecast period.

Further, growing construction industry is also driving the demand for refractories for glass manufacturing. Alumina-zirconia-silica (AZS) fused-cast refractories began to increase in popularity in glass furnace applications in the glass contact and superstructure sector. Silica crown is another refractory product used in glass furnaces. New refractories are being developed that show better resistance to aggressive environment in glass tank and have increased lifetime while providing improved insulation.
