The global Refractory Concrete market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Refractory concrete is a special concrete made of aggregate, cementing agent and admixture in a certain proportion. According to the different cementing agent, refractory concrete can be divided into aluminate refractory concrete, water glass refractory concrete, phosphate refractory concrete and aluminum sulfate refractory concrete. Refractory but the process is simple, without complex concrete although the refractoriness and load softening starting temperature is slightly lower than refractory brick, firing process, good plasticity, easy to make complex shape of the whole product, low cost, life and refractory brick similar, so more and more widely used. Used for furnace lining, furnace door, furnace wall and electric furnace steel trough, etc.

The industry trend for refractory concrete is closely tied to the development of advanced manufacturing techniques and the demand for more efficient and durable materials in industrial settings. As industries strive to increase production rates and improve safety standards, the need for high-quality refractory concrete that can withstand increasingly harsh conditions is growing. Additionally, the rise of renewable energy technologies, such as solar thermal and concentrated solar power plants, which require high-temperature resistant materials, is to the demand for refractory concrete. The trend is towards developing refractory concretes with even better performance characteristics, including higher temperatures resistance, better mechanical strength, and improved resistance to chemical attack.
