A refrigerated boxcar, also known as a reefer car, is a type of railroad freight car designed to transport perishable goods that require temperature control, such as fruits, vegetables, meat, dairy products, and other temperature-sensitive commodities. The boxcar is equipped with a refrigeration or cooling system to maintain a specific temperature range inside the car, helping to preserve the freshness and quality of the transported goods during transit.

Growing Demand for Cold Chain Logistics: The increasing global trade of perishable goods, including food and pharmaceuticals, has been driving the demand for refrigerated transportation solutions, including refrigerated boxcars.

Technological Advancements: Ongoing developments in refrigeration technology have been improving the efficiency and sustainability of refrigerated transportation. This includes more energy-efficient cooling systems and advanced temperature monitoring and control systems.
