## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The global Refrigerated Gas Carriers market size is projected to grow from US\$ 639.8 million in 2022 to US\$ 880.5 million in 2029; it is expected to grow at a CAGR of 4.7% from 2023 to 2029.

Refrigerated Gas Carriers have good prospects for future development.

Refrigerated Gas Carriers are designed to transport cargo at approximately atmospheric pressure and are generally designed to transport large quantities of liquefied petroleum gas and ammonia. Refrigerated Gas Carriers can be divided into semi-refrigerated gas carriers and fully refrigerated gas carriers according to the degree of freezing. Semi-refrigerated gas carriers are increasingly becoming the best way to transport a wide range of gases, from LPG and VCM to propylene and butadiene. Semi-refrigerated gas carriers are most popular among operators of 'small' gas carriers.

The most widely used arrangement for fully refrigerated gas carriers is an independent tank with a single side hull. A fully refrigerated gas carrier requires a complete secondary barrier and the cargo hold space must be inerted when carrying flammable cargo.
