The global Regenerated Lithium Carbonate market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Regenerated lithium carbonate is lithium carbonate obtained by recycling waste lithium resources and reprocessing them. It extracts lithium from waste materials through physical, hydrometallurgical or pyrometallurgical processes, and then converts it into lithium carbonate for use in batteries, ceramics, glass and other fields. The recycling and utilization of recycled lithium carbonate helps reduce dependence on natural lithium resources, promotes the recycling of resources, and reduces the environmental impact of the lithium battery industry.
