Avalanche airbags are safety gear designed to prevent the wearer from being buried while skiing and mountaineering. In an avalanche, larger objects rise to the surface, while smaller objects sink to the bottom. An airbag system incorporated into a backpack, with a large balloon or balloons that inflates at the pull of a cord, is designed to make the person wearing it larger so that they naturally rise to the surface of the snow.

With the rising popularity of ski touring and freeriding many manufacturers notice that there is a need for more protection while being in the freedom of backcountry or high alpine. So nowadays, avalanche airbag backpack became a usual piece of equipment next to your regular avalanche safety equipment: avalanche beacon, probe, and shovel. And thanks to a high demand for this piece of equipment, avalanche airbag backpacks are no longer considered a luxury good but are getting more and more affordable each season. But avalanche airbag packs are only helpful in critical situations of avalanche slides, they in no way guarantee survival and they are not meant to be used as the only mean of protection, and uncertainties related to survival percentages is limiting growth for the Avalanche Airbags market.

Direct-to-consumer is the most lucrative sales channel for avalanche airbags.

Consumer familiarity, and availability of a wide range remain the key USPs of this sales channel. Specialty stores follow suit. These two sales channels collectively account for nearly two-third of all avalanche airbags sold globally.

According to this study, over the next five years the Regenerative Medicine market will register a 6.0% CAGR in terms of revenue, the global market size will reach US\$ 260 million by 2024, from US\$ 190 million in 2019. In particular, this report presents the
