The specification is 2?50 meters. The reinforced anti-crash blanket can Fixed on the slope surface at any angle, it has the characteristics of high porosity and good elasticity, which can increase the growth rate of plants on the scour surface. It will not form 'bald spots' after growing. The grass roots, reinforced anti-scour blanket, and soil will then grow. The closely integrated continuous surface can prevent water and soil loss, slow down the flow of water, and achieve the purpose of slope greening care. Reinforced anti-scouring blankets can not only be used in urban landscaping, wetland vegetation restoration, airports, football fields, golf courses, roof greening and other fields; they are also suitable for sites with large erosion or steep

slopes, such as rivers and reservoirs, , railways, highways, barren mountains, mining areas, etc. for slope reinforcement and ecological restoration; the reinforced anti-scouring blanket can also be used in harsh environments such as sandy soil and saline-alkali land that require long-term protection and improvement, thereby achieving windproof sand fixation, saline-alkali control and For the purpose of ecological vegetation restoration, the products are widely used in the slope protection and greening industry.
