The global Reinforcing Steels market size is predicted to grow from US\$ 285240 million in 2025 to US\$ 379320 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Reinforcing Steels, or rebar (short for reinforcing bar), known when massed as reinforcing steel or reinforcement steel, is a steel bar or mesh of steel wires used as a tension device in reinforced concrete and reinforced masonry structures to strengthen and aid the concrete under tension. Concrete is strong under compression, but has weak tensile strength. Rebar significantly increases the tensile strength of the structure. Rebar's surface is often deformed to promote a better bond with the concrete.

With increasing urbanization, steel rebars are experiencing extensive utilization from the non-residential segment, like the oil and gas industry, infrastructure, commercial construction, corporate buildings, etc. The United States boasts a colossal construction sector that employs over 9.9 million employees as of January 2023. Playing a prominent role in commercial and non-residential construction, the United States construction sector exhibits a significant contribution to the country's economy. Due to increasing non-residential construction activities in the United States the consumption of steel rebar in the country is expected to increase. According to the United States Census Bureau, the value of new construction output in the United States amounted to USD 1,792.9 billion in December 2022. The non-residential sector accounted for USD 997.14 billion in March 2023, registering a growth of 18.8% compared to the same period the previous year.
