The global Remicade (Infliximab) Monoclonal Antibody market size is predicted to grow from US\$ 3001 million in 2025 to US\$ 4423 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Infliximab is a monoclonal anti tumor necrosis factor alpha antibody used in the treatment of a wide variety of inflammatory conditions such as rheumatoid arthritis, Crohn's disease, and ankylosing spondylitis. Avsola, Flixabi, Inflectra, Remicade, Renflexis.

The Remicade (Infliximab) monoclonal antibody market is driven by several factors. One of the primary drivers is the high prevalence of chronic autoimmune diseases, such as rheumatoid arthritis, Crohn's disease, and psoriasis, which require targeted immunotherapy for effective management. Remicade, as a monoclonal antibody, has demonstrated significant efficacy in treating these conditions by specifically targeting and inhibiting tumor necrosis factor-alpha (TNF-alpha), a key mediator of inflammation. Additionally, the increasing adoption of biologic therapies, including monoclonal antibodies, in clinical practice has fueled the demand for Remicade. The proven clinical efficacy, long-term safety profile, and established therapeutic outcomes have contributed to its market growth. Moreover, the expanding patient pool, coupled with the rising awareness and diagnosis rates of autoimmune diseases, has created a greater demand for targeted biologic treatments like Remicade. Furthermore, the presence of robust research and development activities aimed at developing novel monoclonal antibodies and exploring new indications for Remicade continues to drive market growth. Overall, the Remicade monoclonal antibody market is driven by the high prevalence of autoimmune diseases, increasing adoption of biologic therapies, established clinical efficacy, expanding patient pool, and ongoing research and

development efforts.
