According to this study, the global Remote Radio Unit (RRU) market size will reach US\$ million by 2031.

Radio Remote Unit(RRU) is the distributed and integrated frequency unit that connects to an operators network with the User Equipment's (UE's) like Cell Phone and mobile devices.

The logical term 'distributed and integrated' is because traditionally the radio architecture for cellular system is based on a single-standalone system(Base Stations) usually installed indoor but now, the cellular architecture is divided.

So now the BTS(Base Transceiver Station) is the integration of various radio unit like BBU and RRU. Despite installing only in indoor , radio units are now installed in the tower below the Antenna.
