The global Remote Terminal Unit (RTU) in Smart Grid market size is predicted to grow from US\$ 74.7 million in 2025 to US\$ 85.1 million in 2031; it is expected to grow at a CAGR of 2.2% from 2025 to 2031.

Remote Terminal Unit (RTU) is a device installed at a remote location that collects data, codes the data into a format that is transmittable and transmits the data back to a central station, or master. An RTU also collects information from the master device and implements processes that are directed by the master. RTUs are equipped with input channels for sensing or metering, output channels for control, indication or alarms and a communications port.

In a smart grid, the remote terminal unit can collect the data of the electric power condition and transmits the data to the station. Today, RTU is a necessary part in the smart grid and transformer substations.

Global remote terminal unit (RTU) in Smart Grid key players include General Electric, ABB, Schneider Electric, Honeywell, Siemens, etc. Global top five manufacturers hold a share over 60%.

North America is the largest market, with a share over 30%, followed by EU and Asia (ex. China), both have a share over 45%.

In terms of product, medium size is the largest segment, with a share over 45%. And in terms of application, the largest application is power plant, followed by company power

sector, etc.
