The global Remote Water Monitoring System market size is predicted to grow from US\$ 2116 million in 2025 to US\$ 3359 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

A Remote Water Monitoring System is a comprehensive system that utilizes online sensors, telemetry terminals, RTUs/DTUs, SCADA, IoT communication networks, cloud platforms, and data analytics software to conduct continuous remote monitoring, alarming, and operations and maintenance management for water quality, water levels, flow rates, water pressure, pumping stations, reservoirs, river channels, discharge outlets, water supply networks, and wastewater treatment facilities. Its core objective is to reduce the frequency of manual inspections while enabling real-time situational awareness, remote early warning, data traceability, anomaly diagnosis, and intelligent dispatching for water resources, aquatic environments, and water utility infrastructure.

Traditional water quality and water level monitoring relies on manual sampling, laboratory analysis, and periodic inspections?methods plagued by issues such as data lag, low sampling frequency, and slow response times to anomalies. Remote water monitoring systems, which utilize online sensors and cloud-based platforms to enable continuous data acquisition, remote viewing, and automated alerts, are rapidly becoming essential infrastructure for water utilities, environmental water management, industrial discharge control, and agricultural irrigation management. Specific sites?including industrial discharge outlets, wastewater treatment plants, river and lake cross-sections, and drinking water source areas?require higher-frequency data acquisition and advanced anomaly warning capabilities. Focused Photonics' online monitoring solution for water pollution sources is capable of monitoring parameters such as pH, COD, ammonia nitrogen, total phosphorus, total nitrogen, flow rate, and heavy

metals; the system also incorporates modules for sample pretreatment, data acquisition, video surveillance, and monitoring station facility management.
