The Removable Plate Heat Exchanger (RPHE) is a compact and efficient heat transfer device based on a stacked-plate configuration, where its functional core consists of multiple metal thin plates with corrugated or chevron-shaped flow channels assembled via a frame and gaskets. The plate surfaces are engineered with enhanced heat transfer structures through stamping or etching processes, enabling fluids to flow alternately in narrow channels between adjacent plates for indirect heat transfer via the plate walls. The device features a detachable frame design, allowing the plate stack to be independently disassembled and cleaned by loosening clamping bolts for maintenance or inspection. Its structural design combines high heat transfer efficiency with flexibility, enabling area adjustment by adding or removing plates to accommodate varying operating conditions, and is widely applied in chemical, food, and energy industries for liquid-liquid or vapor-liquid heat exchange processes.
