Renewable hydrocarbon fuels (also called 'green' hydrocarbons, biohydrocarbons, drop-in biofuels, and sustainable or advanced hydrocarbon biofuels) are fuels produced from biomass sources through a variety of biological, thermal, and chemical processes. These products are similar to petroleum gasoline, diesel, or jet fuel in chemical makeup and are therefore considered infrastructure-compatible fuels. It is expected that these fuels can be used in vehicles without requiring engine modifications and can use existing petroleum fuel pipelines and retail distribution systems.
