RENY is a high performance polyamide compound reinforced with glass fiber, carbon fiber or mineral fillers, based on proprietary polyamides (mainly polyamide MXD6) developed by Mitsubishi. Polyamide MXD6 is a crystalline thermoplastic polymer, manufactured from m-xylylene diamine (MXDA) and adipic acid. The compounds display a high strength in engineering plastics when reinforced by glass fiber or mineral fillers, thus being suitable for replacement of metal parts.

A nut is a type of fastener with a threaded hole. Nuts are almost always used in conjunction with a mating bolt to fasten multiple parts together. The two partners are kept together by a combination of their threads' friction (with slight elastic deformation), a slight stretching of the bolt, and compression of the parts to be held together.
