RENY is a high performance polyamide compound reinforced with glass fiber, carbon fiber or mineral fillers, based on proprietary polyamides (mainly polyamide MXD6) developed by Mitsubishi. Polyamide MXD6 is a crystalline thermoplastic polymer, manufactured from m-xylylene diamine (MXDA) and adipic acid. The compounds display a high strength in engineering plastics when reinforced by glass fiber or mineral fillers, thus being suitable for replacement of metal parts.

Screws are often self-threading (also known as self-tapping) where the thread cuts into the material when the screw is turned, creating an internal thread that helps pull fastened materials together and prevent pull-out.
