The report requires updating with new data and is sent in 48 hours after order is placed.

There are three types of reproductive medicine that use microscopes for fertility treatments in both humans and animals and each uses some different microscopy techniques. In all three reproduction techniques the eggs (ova) are removed from a female and fertilized outside of the female's body (in vitro) with sperm. Fertilized eggs (zygotes) are then implanted into the same or another female's uterus to establish pregnancy. The three reproductive medicine techniques are: In Vitro Fertilization (IVF), Intracytoplasmic Sperm Injection (ICSI) and Intracytoplasmic Morphologically-Selected Sperm Injection (IMSI).
