Reseller hosting is a type of web hosting service where the hosting provider allows organizations to buy or rent hosting packages in bulk and then sell them to customers. Hosting providers provide hardware, software, and general infrastructure to organizations that purchase their hosting packages so that they can host their customers' websites. This type of hosting is popular among web development and design agencies who want to provide hosting services to their clients. Reseller hosting can take a white-label approach, where a company that buys or rents hosting services from a provider can repackage and resell those services under its own brand name and manage the business for its customers. In most settings, the rental organization will be responsible for providing customer support, billing, and allocating resources based on the customer's requirements. While the hosting provider will still provide the equipment, the organization leasing the service will be responsible for hosting the website for its customers. Reseller hosting can also offer premium services to customers of organizations that rent their services, including automatic updates, backups, and free SSL certificates. They may also sell domain names or provide dedicated customer support.

The global Reseller Hosting Software market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
