The global Resettable Temperature Control Switch market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A resettable temperature control switch, also known as a resettable thermal protector, is a protective device that controls the circuit on and off by sensing temperature changes. Its working principle is that when the temperature of the equipment exceeds the set threshold, the switch will automatically disconnect the circuit to prevent the equipment from overheating; after the equipment cools down, the switch will automatically reset and the circuit will be re-connected. The key upstream raw materials for resettable temperature control switches include high-performance plastics, insulating materials and bimetals. The bimetal sheet is the core component, and major global suppliers include EMS, Dongbu Metal and Tokai Konetsu Kogyo. Downstream customers mainly include household appliance manufacturers, industrial machinery manufacturers and automobile manufacturers. In terms of market price, resettable temperature control switches for household appliances are priced at around \$5/unit, while industrial temperature control switches are priced between \$10 and \$200/unit, depending on specifications and applications.
